comfort in control

The motorised valve is probably the hardest working component in 'wet' domestic central heating systems. The Motor On/Motor Off (MoMo) valves from Sunvic only uses energy when the valve changes position, resulting in greater reliability and longer life. Independent testing has shown the MoMo to be 96% more energy efficient than conventional spring return valves.

2-Port MoMo Valve

- 96% more energy efficient than conventional spring return valves
- Highly reliable and reduced energy consumption
- Simple industry standard wiring
- Replaces most makes of spring return valves
- Robust manual wheel and valve position indicator
- Motor open/Motor closed operation
- Maximum flow temperature of 93°C
